Applications:

- Homes
- Yards
- Schools
- Parks
- Farms
- Kennels
- Wooded lots
- Landscaping
- Anywhere fleas and ticks can be a problem.

EXCELLENT form of prevention against future infestations.

Flea and Tick Granular Repellent is the first all natural granular flea and tick control that is safe to use around kids, farm animals, pets and plants when used as directed. Indoor and outdoor use.

The organic oils (Cedar, Cinnamon, Mint, and Lemon Grass) leave the Flea and Tick Repelling Granules with a pleasant odor and can be used outdoors wherever problems occur. Combined with Fuller Earth, these natural oils make Flea & Tick repellent ideal for pest control at school grounds, nurseries and businesses where chemical control methods are not the best choice.

For kennel use, treat each area separately. For best results, use in combination with conventional flea and tick controls and collars. **NOTE:** not intended for use ON pets or domestic animals - that's where the conventional controls and collars should be used.

Application: The granules make application easy. Use the sprinkler cap on the container or use a fertilizer spreader. Lightly spread the Flea and Tick granules in a circular pattern outward from the intended area of flea and tick control.

Coverage: A four-pound container of Flea and Tick Granular Repellent will protect approximately 3,200 square feet and will remain effective for two to three weeks.

- Heavy infestations will require a heavier initial application.
- Severe infestations: we suggest that you have the cause of the infestation investigated, identified and then treated with conventional insect control methods.

Remember: Flea and Tick Granular Repellent is an excellent form of prevention. Use to eliminate future infestations.
