

Protect wild birds and windows with WindowAlert

Problem: Wild birds flying into windows and dying from the impact. Tragically, millions of wild birds die this way every year.

Solution: WindowAlert is a static-cling decal that can be affixed to the exterior of glass windows. The WindowAlert decals brilliantly reflect ultraviolet light. Birds can see ultraviolet light; humans cannot. The decals act as a neon stoplight for birds. Window Alert decals are available in **Maple Leaf, Humming Bird, Butterfly** and **Snowflake** shapes.

Placement: 3 ideas to help you effectively place your WindowAlert decals.

1. Bird strikes may occur when birds can see through one window, across the inside space and out another window. Position your decals to block this line of sight.
2. Bird strikes can occur when birds see sky reflected in a window. This can occur in individual windows or in certain areas of a large windows. Use the decals to break up this reflection.
3. Male birds often stake out territories. When they see their own reflection, they mistake it for an intruder and attack. Place the decals in these areas.

Application

1. Clean glass with water and cloth (do not use window cleaners or soap).
2. Decal and glass should be warm. During winter months, clean glass with hot water.
3. Place on exterior side of glass. Interior placement is possible, but is MUCH less effective.
4. Place decals alone or in groups every 3 square feet of glass.
5. Decals will degrade over time based on exposure and local elevation. Replace every year or as needed.

If you have any questions or need more information on the WindowAlert decals please contact Nixalite of America Inc.

Available in 4 decal packs or in cases of 48 decals
