

# Soft Tip Bird Control

Flat-Tipped, Stainless Steel Bird Spikes From Nixalite®  
A Name You Know, Products You Trust

Sometimes..  
a 'soft' touch  
is the best choice.

Nixalite's **Soft Tip** wire option puts a flat tip at the ends of the stainless steel wires.

Use Soft Tip where human contact is the primary concern. For all other applications, use the original pointed wire designs.

Select Soft Tip only when installing Nixalite Premium or E-Spike models for **less demanding bird control installations** and/or where **frequent human contact is likely**. For all other applications, use the original pointed wire designs.

Soft Tip is available on **Nixalite Premium Models S and H** as well as all **E-Spike Models**.

Use the **original designs** for nearly all bird control installations and/or where human contact is unlikely. While both pointed and Soft Tip are effective and humane, **only the pointed wire designs should be used for climbing animal barriers**.
