

# Whole Control Mole Repellent

Repels moles and inhibits the  
formation of burrows, tunnels  
and holes caused by moles.

**Whole Control -All-natural, non-toxic and biodegradable ingredients.** At the first sign of mole activity apply Whole Control as directed. Unaffected by rain, an application can remain effective for up to three months.

**Application with Spray Quart:** on the spray control valve (included with your quart), find and remove the plastic shipping tab that prevents the valve from moving. Install the spray control valve, leaving the valve set to 'OFF'. Screw your garden hose into the back of the spray control valve and turn the water on to full pressure. When you are ready to apply Whole Control, turn the valve to 'ON'. After the container is empty, turn the valve to 'Water' and continue to spray with water until the soil is saturated (a lawn sprinkler system can be used for this as well).

**Application by the gallon:** We highly recommend using a quart sized spray applicator made for use with a garden hose. This is the most efficient method of applying Whole Control. Spray applicators are available at local lawn and garden centers. Fill the solution container and apply until Whole Control is gone. Continue to spray with water until the soil is saturated.

## Coverage:

- One quart should cover approximately 10,000 square feet
- One gallon should cover approximately 40,000 square feet.

## Take these steps to increase your success:

- Treat areas with grubicide as well as Whole Control
- Use Mole Out mole repellent with the Whole Control

**Note: ALWAYS read all product information and the product label before application!!**
